Appendix F - Trend Analysis

## 1. INTRODUCTION

The Arterial Connectivity Study (ACS) along I-595 Corridor is being conducted jointly by the Florida Department of Transportation (FDOT) and Broward Metropolitan Planning Organization (MPO). The purpose of the Study is to identify and define transportation problems and develop effective solutions. The goal is to provide better connectivity for all modes and relieve congestion along the north-south study roadways and at their access points with I-595 and SR 84. The ACS along I-595 Corridor is a planning study covering a large area including the Plantation Midtown Area. The process and level of detail involved in traffic forecasting for a planning study is not as detailed as the process and level of detail involved in traffic forecasting for a PD&E Study or design project. As part of a PD&E Study for a new roadway bridge, a more detailed modeling effort would occur including examining coding of the surrounding highway network and Traffic Analysis Zones (TAZs).

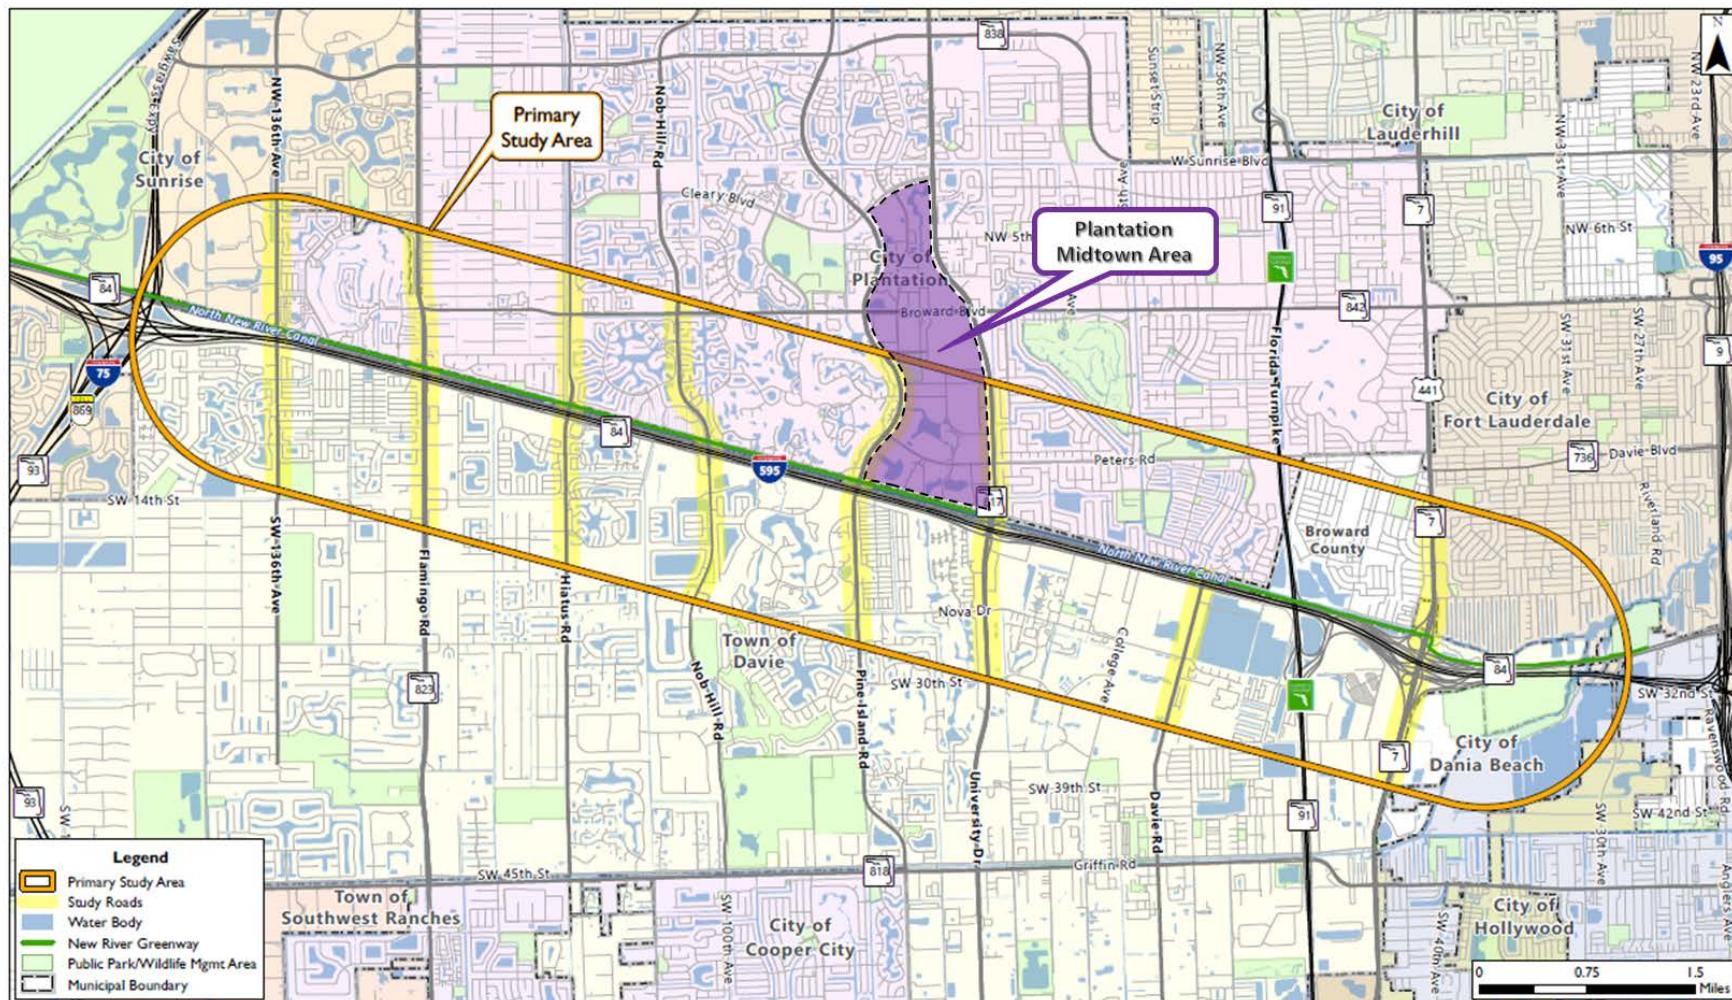

The City of Plantation is planning to conduct a Project Development and Environment (PD&E) Study to evaluate a new two-way roadway bridge over the North New River Canal that would connect the area generally located north of SR 84 and between Pine Island Road and University Drive, to and from westbound SR 84. The purpose of this memorandum is to provide a copy of the existing traffic data collected and preliminary forecasted future (2045) daily traffic volumes for the roadways within the influence area around the proposed Midtown Bridge.

The traffic volume data collected for the ACS within the influence area is summarized herein. In addition, future year 2045 daily traffic projections with and without the proposed bridge are provided for the Midtown bridge influence area. This traffic information is being provided to assist the City in developing information to be used for the Midtown Bridge PD&E Study.

The study area for the ACS along I-595 Corridor is in central Broward County, Florida along the I-595 and SR 84 corridor, between SW 136th Avenue and SR 7/US-441. The study limits extend approximately one mile north and one mile south of I-595 and include the eight north-south arterials that cross I-595 and SR 84. The overall study area as shown in Figure 1, includes University Drive and Pine Island Road in the Plantation Midtown Area.

The Plantation Midtown Area is a regional hub of commercial and employment activities centrally located within the City of Plantation in Broward County. The Plantation Midtown Area boundary as shown in Figure 1, extends from I-595 to the south, Cleary Boulevard to the north, Pine Island Road to the west, and University Drive to the east. The area includes residential neighborhoods, local business communities, and a significant daytime employee population. Future growth in the City of Plantation is expected to be focused within the Plantation Midtown Area.

Figure 1: Study Area for Arterial Connectivity Study along I-595 Corridor

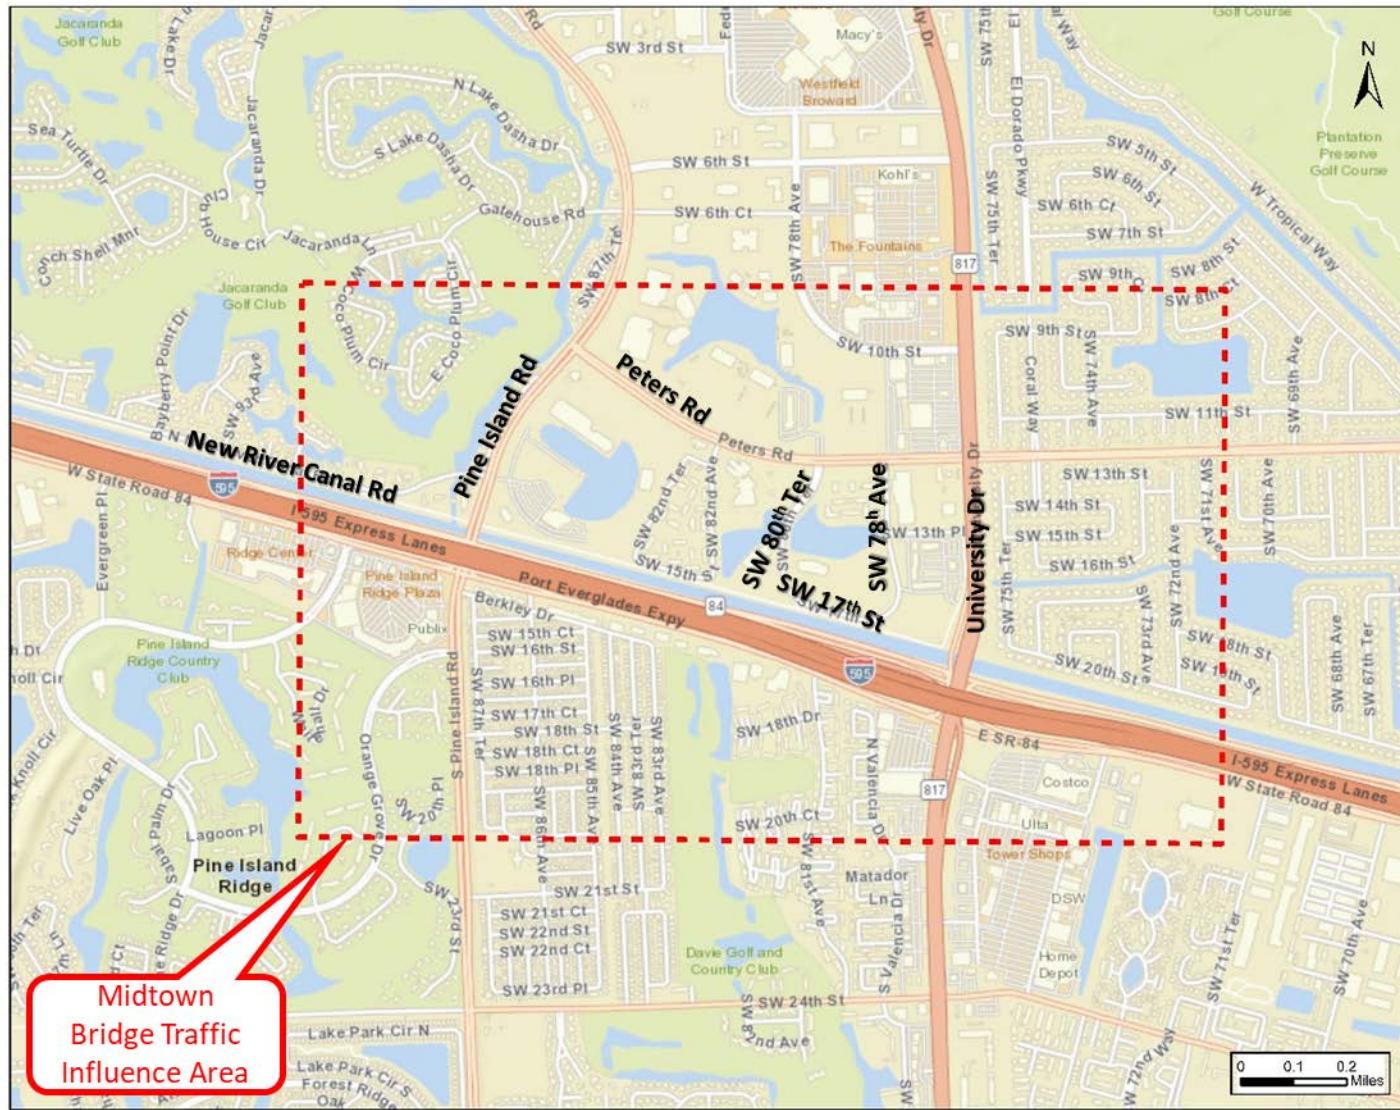

The City is evaluating both short-term and long-term options to improve the transportation network to accommodate the anticipated growth. Strategies include building a bridge between University Drive and Pine Island Road to provide direct access to and from westbound SR 84, intended to reduce congestion on the existing nearby roadways. The traffic influence area for the Midtown Bridge is illustrated in Figure 2.

In addition to a new access bridge connection between SW 17th Street and SR 84, the City's overall vision for the Midtown District includes creating a north-south connector in the middle of the Midtown District which would run parallel to University Drive and Pine Island Road. Additional information such as design or concept plans for the north-south connector were not available at this time. Therefore, changes related to the north-south connector are not included in this report.

The following tasks were performed and are summarized in this technical memorandum:

- Collected traffic data for roadway segments and intersections within the study limits,
- Summarized traffic data for existing conditions,
- Reviewed and summarized available historical traffic data from the FDOT Florida Traffic Online Web Application,
- Reviewed the latest version of the Southeast Florida Regional Planning Model (SERPM 8) and performed model runs without Midtown Bridge (No Build scenario) and with Midtown Bridge (Build scenario), and
- Developed traffic volume projections for the study corridor for both No Build and Build scenarios.

**Figure 2: Midtown Bridge Influence Area**

## 2. DATA COLLECTION

Traffic volume data along University Drive was obtained from the SR 817/University Drive - Data Collection Report dated November 19, 2019. Most traffic volume data collected along SR 817/University Drive was collected on a typical weekday in September 2019. However, due to construction activities at the intersection of Peters Road and University Drive, data at this intersection was collected in October 2019. The SR 817/University Drive traffic volume data for each intersection includes 8-hour turning movement counts (6:30 AM to 9:30 AM, 11:00 AM to 1:00 PM, and 4:00 PM to 7:00 PM), and Right-Turn-On-Red (RTOR) volumes were recorded. In addition, directional 24-hour vehicle classification counts were collected for all SR 817/University Drive intersection approaches.

Along Pine Island Road and Peters Road, traffic volume data was collected on a typical weekday, Tuesday, December 10, 2019. The traffic data for each intersection included 4-hour turning movement counts (7:00 AM to 9:00 AM and 4:00 PM to 6:00 PM) and 24-hour bi-directional link counts.

In addition to the traffic volume count data collected specifically for the Arterial Connectivity Study, 24-hour traffic volume counts (synopsis reports) available from FDOT's Florida Traffic Online (2019) website were obtained for selected links.

The intersection turning movement volumes were collected at the following intersections:

1. Pine Island Road and Peters Road\*
2. Pine Island Road and New River Canal Road
3. Pine Island Road and SR 84 (eastbound and westbound)
4. Peters Road and SW 80th Terrace
5. University Drive and Peters Road\*

---

\*Traffic data obtained from University Drive Data Collection Report

6. University Drive and SR 84 (eastbound and westbound) \*
7. I-595 eastbound on-ramp from University Drive\*

The 24-hour link traffic counts were collected for the following roadways:

1. New River Canal Road east of Pine Island Road
2. New River Canal Road west of Pine Island Road
3. Pine Island Road south of SR 84 eastbound
4. Peters Road west of University Drive
5. SW 17th Street between SW 80th Terrace and SW 78th Avenue
6. SW 81st Avenue south of SR 84 eastbound
7. Pine Island Road north of Peters Road\*
8. Pine Island Road south of Peters Road\*
9. Peters Road east of Pine Island Road\*
10. University Drive north of Peters Road\*
11. University Drive south of Peters Road\*
12. Peters Road east of University Drive\*
13. Peters Road west of University Drive\*
14. University Drive north of SR 84 westbound\*
15. SR 84 westbound east of University Drive\*
16. I-595 eastbound on-ramp from University Drive southbound\*
17. University Drive south of SR 84 eastbound\*
18. SR 84 eastbound east of University Drive\*
19. I-595 westbound on-ramp from University Drive northbound\*

---

\*Traffic data obtained from University Drive Data Collection Report

The FDOT 2019 synopsis reports were obtained for the following roadway segments:

1. Site 860600 – SR 84 westbound west of University Drive (west of I-595 off-ramp)
2. Site 860601 – SR 84 eastbound east of Pine Island Road
3. Site 860607 – SR 84 westbound west of Pine Island Road (east of I-595 on-ramp)
4. Site 860628 – SR 84 eastbound west of Pine Island Road
5. Site 860629 – SR 84 eastbound west of University Drive (east of I-595 on-ramp)
6. Site 864275 – Eastbound I-595 off-ramp to eastbound SR 84 and University Drive

Figure 3 indicates the locations where intersection turning movement counts were collected. Figure 4 identifies the locations where daily traffic volume (link) counts were collected.

Figure 3: Intersection Turning Movement Count Locations

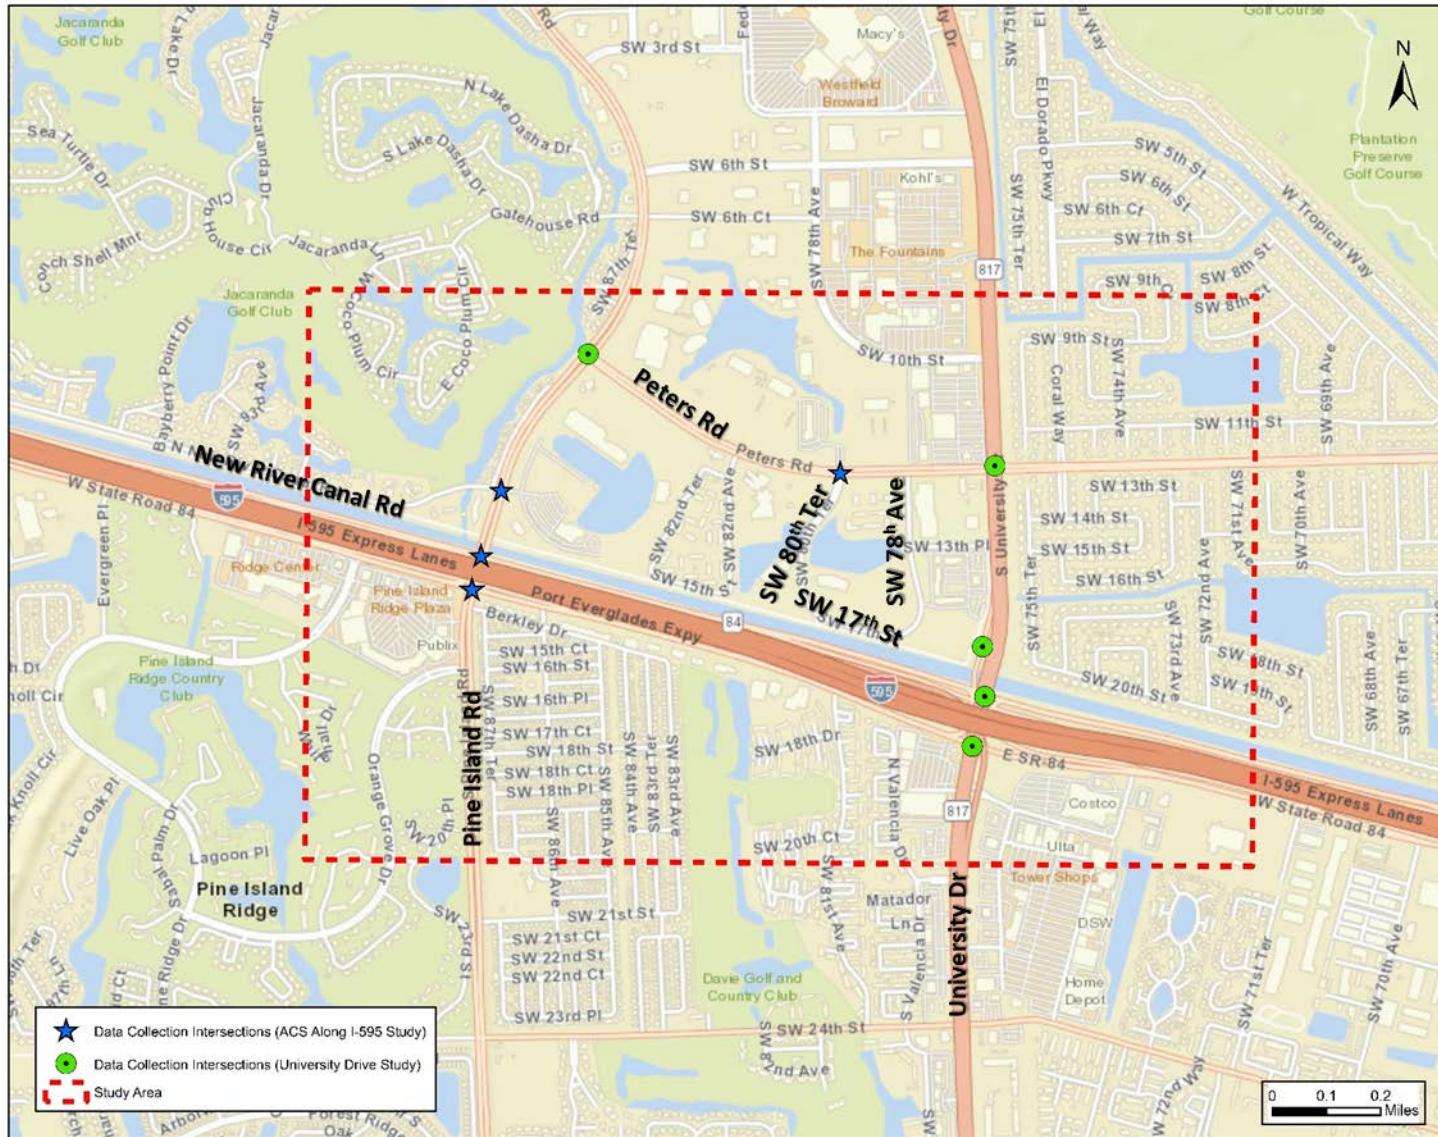

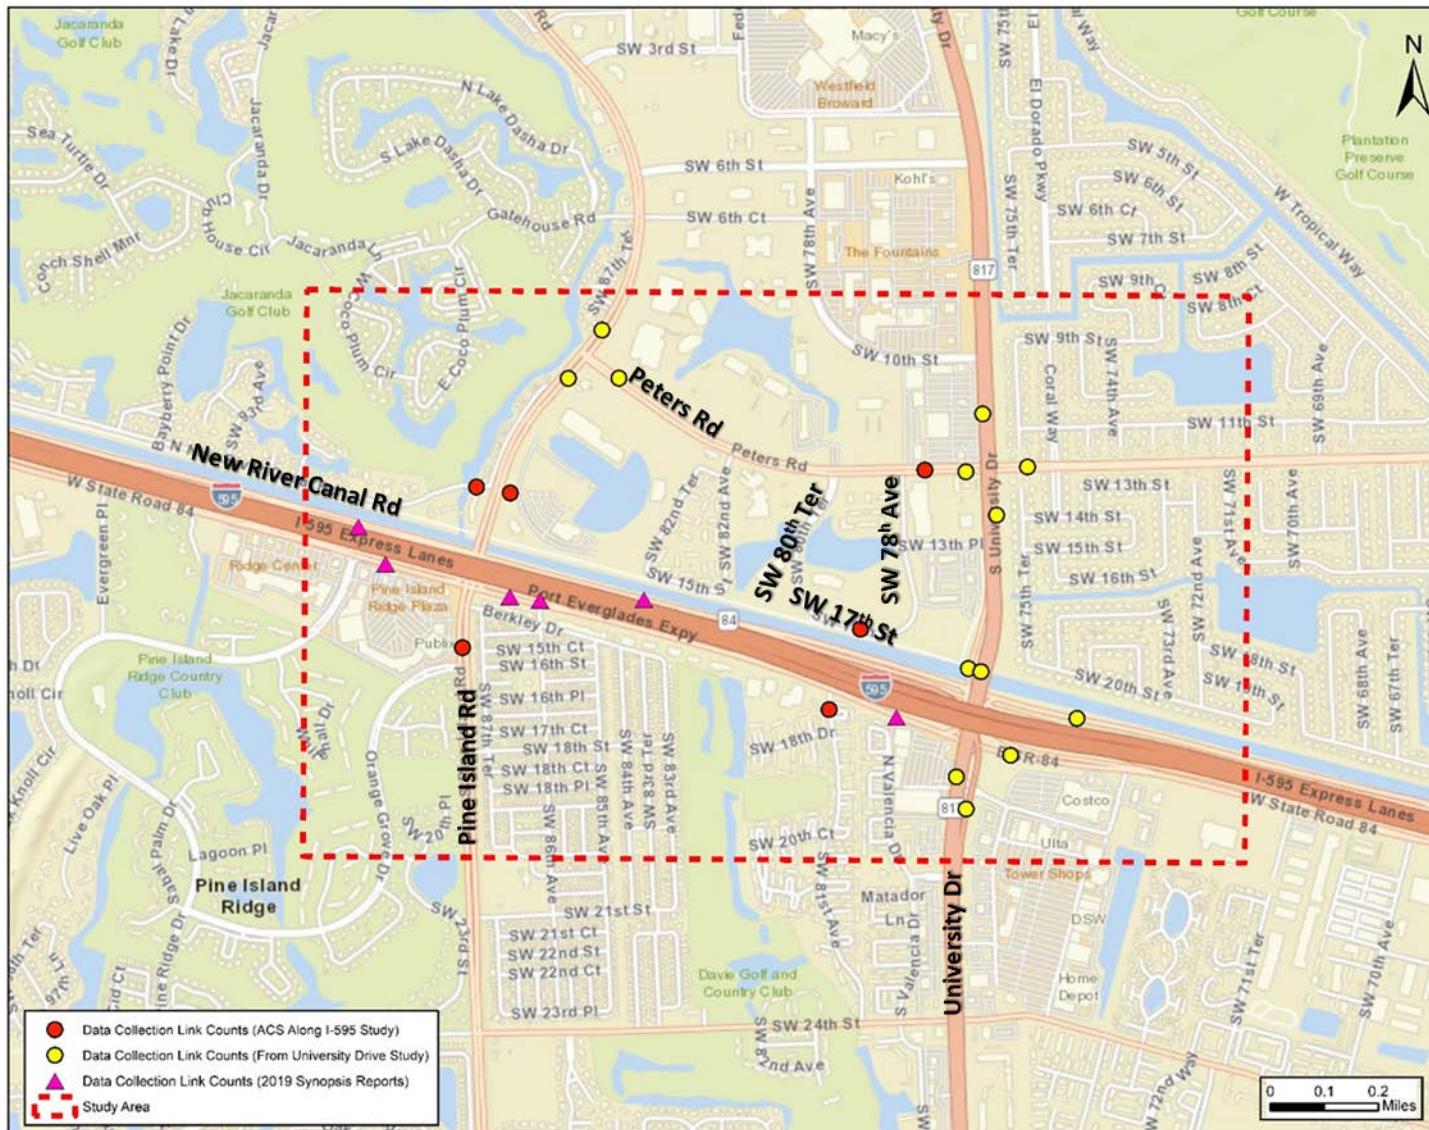

Figure 4: Daily Traffic Volume (Link Count) Locations

### 3. TRAFFIC DATA SUMMARY

The traffic volume count data is provided in Appendix A, including the 24-hour (daily) volume link counts, FDOT synopsis reports, and peak-period intersection turning movement counts.

Applicable axle correction factors and seasonal factors published by FDOT and obtained through Florida Traffic Online (2019), were applied to the 24-hour traffic volumes collected from the field, to estimate the 2019 Annual Average Daily Traffic (AADT) for each approach of the study intersections. Axle correction factors did not apply to the classification counts obtained, since the number of vehicles (including trucks) were counted, instead of number of axles.

The 24-hour (daily) traffic counts collected as part of the Arterial Connectivity Study along I-595 Corridor were two-way axle counts. Therefore, both seasonal factors and axle correction factors were used to adjust the raw counts to AADTs. The 24-hour (daily) traffic counts obtained from the University Drive Study were vehicle classification counts representing one-way traffic volumes leading to the study intersections. Only seasonal factors were used to adjust the raw counts to directional AADTs. The directional AADTs were then converted to two-way AADTs (see column “2019 Adjusted AADT” in Table 1). The count was multiplied by two where only one direction was counted, and where both directions were counted at adjacent intersections, those two volumes were added together.

The 24-hour (daily) traffic volumes presented in the 2019 FDOT synopsis reports are vehicle classification counts collected for three consecutive weekdays during different times of the year. The average of the three-day counts was calculated first to obtain a representative average daily traffic (ADT). The ADTs were then converted to AADTs by applying seasonal factors corresponding to the week when the counts were collected.

The estimated 2019 AADTs were then rounded following the guidelines in the 2019 Project Traffic Forecasting Handbook. The daily traffic counts, seasonal factors, axle adjustment factors, and estimated 2019 AADTs are presented in Table 1.

The AM and PM peak hour timeframes were determined for intersections within the study area from the peak-period intersection traffic volume counts. They are:

- 7:30 AM to 8:30 AM
- 5:00 PM to 6:00 PM

Using the field collected peak hour intersection turning movement counts, the turning movement volumes were balanced to 0% between intersections where no driveways connect, and to no more than a 7% difference where driveways do connect. The balanced peak hour intersection turning movement volumes are presented in Figure 4.

**Table 1: 2019 Daily Counts Summary**

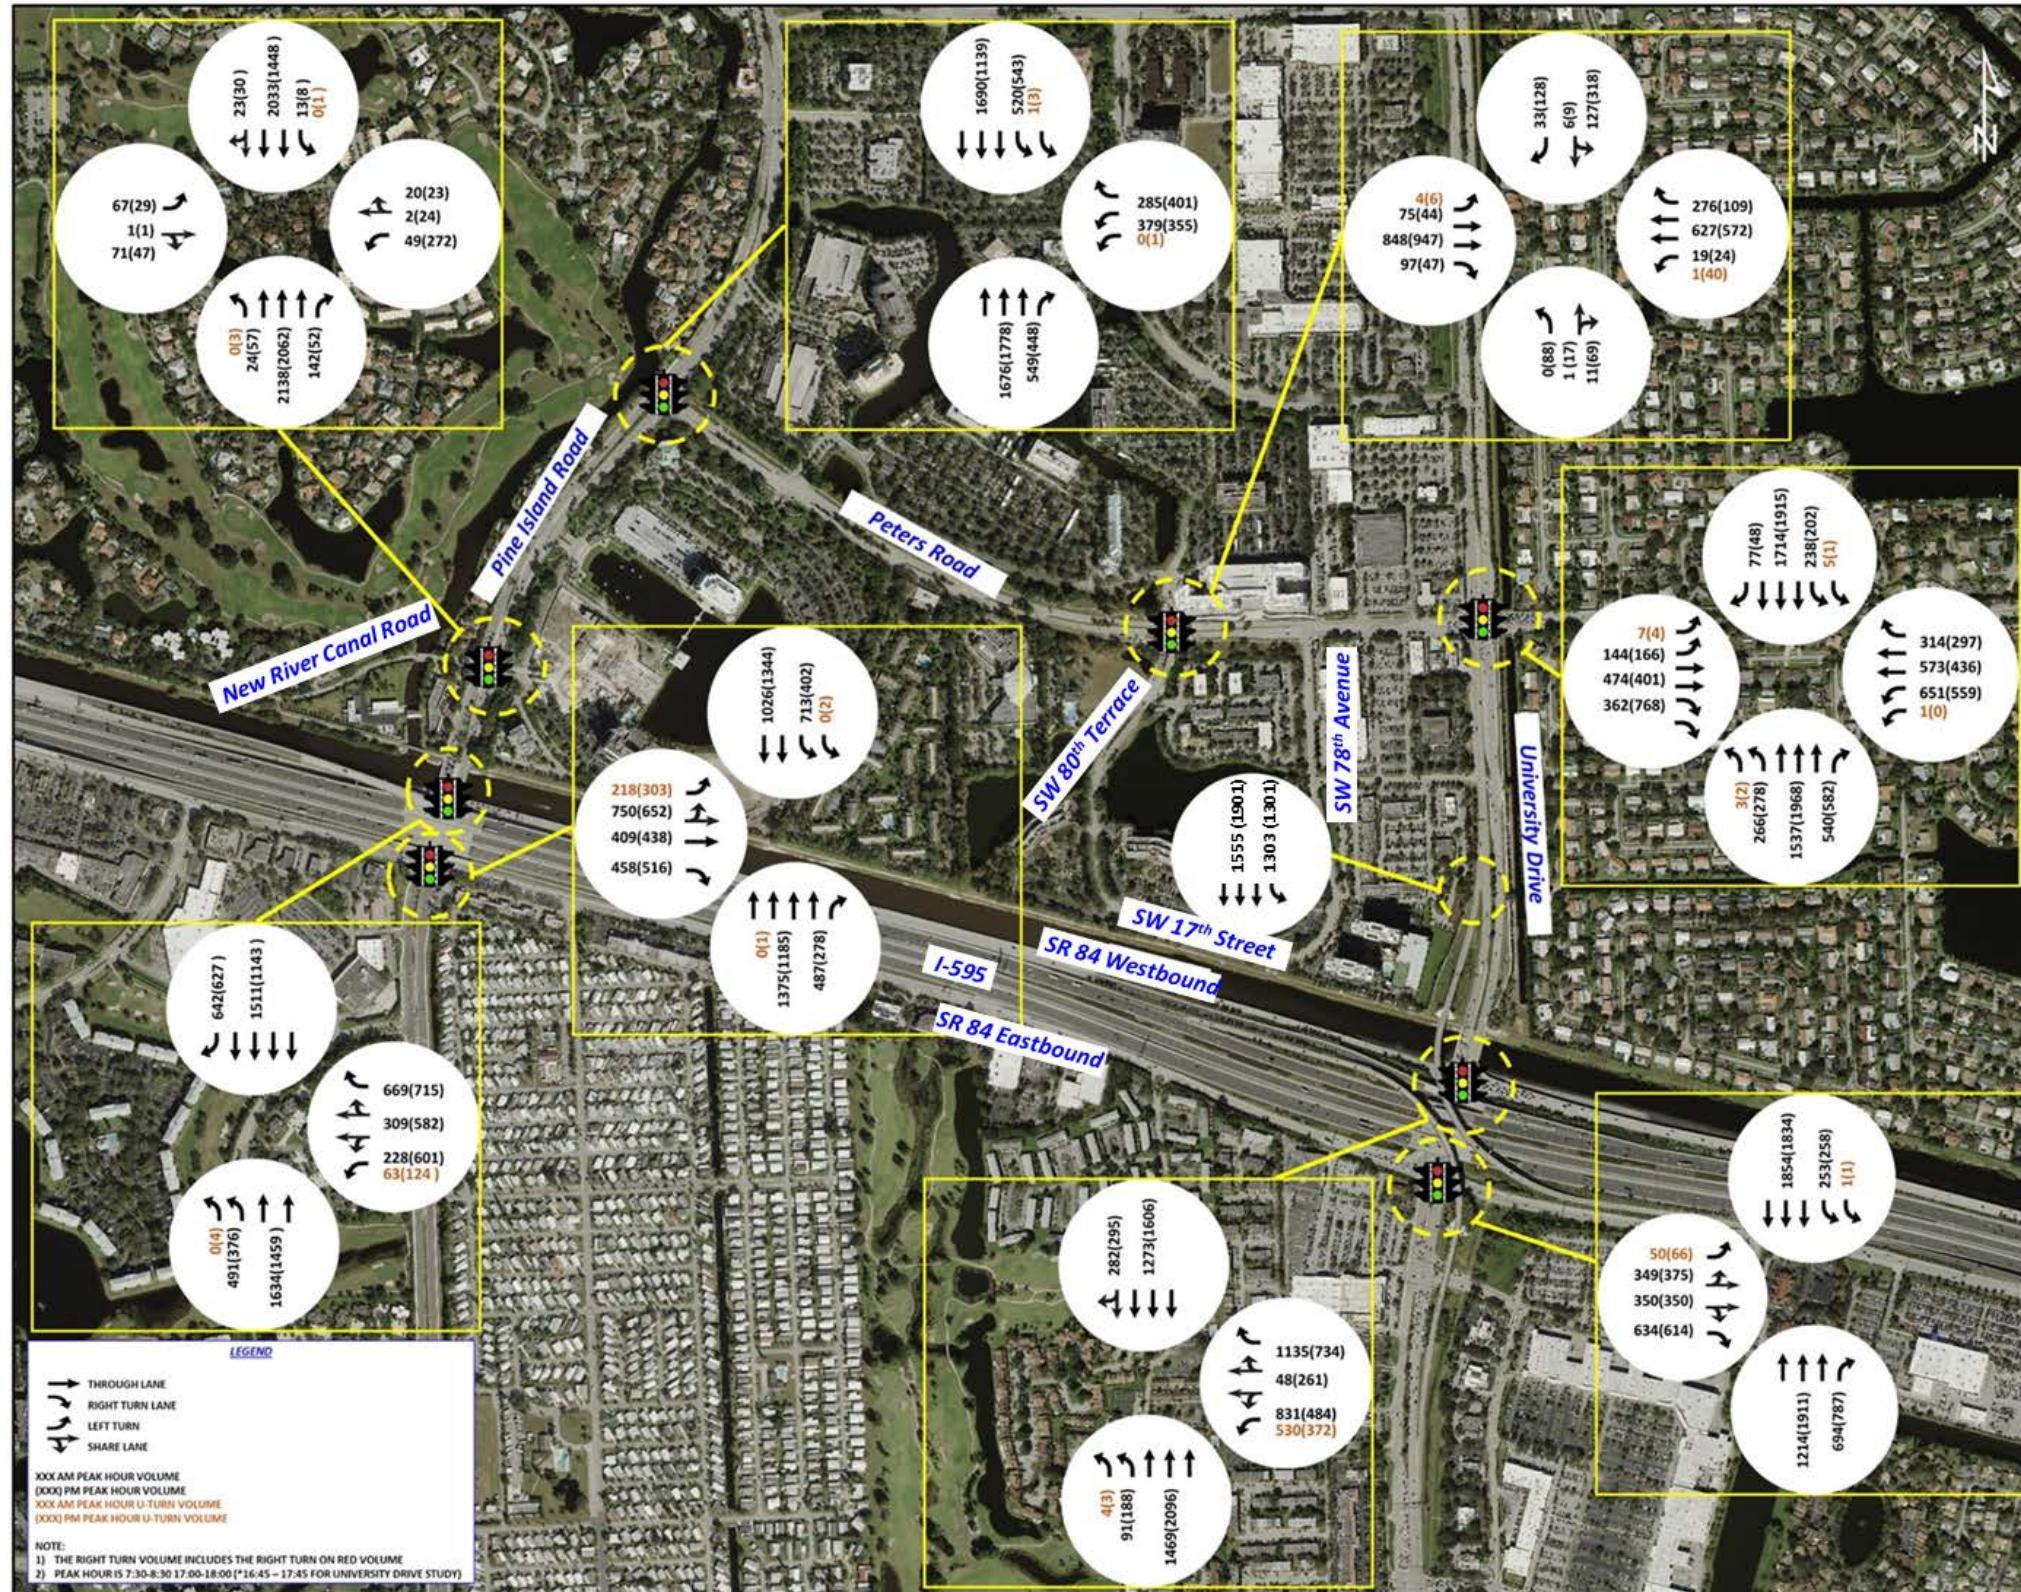

Study Corridor	Intersection	Location	Daily Count	2019 Seasonal Factor	2019 Axle Correction Factor	2019 AADT	2019* Adjusted AADT	2019 Rounded AADT	Date
<b>Counts Collected as Part of ACS Along I-595 Study (two-way axle counts)</b>									
Pine Island Road	New River Canal Road	New River Canal Road East of Pine Island Road	4,117	1.00	1.00	4,117		4,100	12/10/2019

## 4. TRAFFIC FORECASTING

### 4.1 2045 No Build AADT Forecast

Various growth rates for the area and roadways were evaluated to determine an appropriate traffic growth rate to utilize to forecast the future 2045 No Build traffic volumes. Three types of growth rates were reviewed. They are summarized below.

1. Regression analysis of five (5) years of historical AADTs from 2015 to 2019. The five-year historical data represents the most recent traffic patterns within the study area since the reconstruction of I-595 was completed, and the reversible tolled express lanes were built in the median and new braided ramps were constructed on I-595. Trend line analysis, consistent with FDOTs Trend Analysis spreadsheet, was used to estimate linear growth rates based on the last five years of AADT at each of the following count stations.
  - 865314: Pine Island Road North of SR 84 Westbound
  - 860045: University Drive South of Northbound Ramp to I-595 Westbound
  - 860600: SR 84 Westbound West of University Drive
  - 860601: SR 84 Eastbound East of Pine Island Road
  - 860607: SR 84 Westbound West of Pine Island Road
  - 867341: Peters Road East of Pine Island Road
  - 867694: Pine Island Road South of Broward Boulevard
  - 867129: University Drive North of Peters Road
  - 860471: University Drive South of Peters Road
  - 867057: Peters Road East of University Drive
  - 860617: SR 84 Westbound East of University Drive
  - 860628: SR 84 Eastbound West of Pine Island Road
  - 860629: SR 84 Eastbound West of University Drive

- 864222: I-595 Westbound On-Ramp from SR 817/University Drive Northbound
  - 864271: Southbound University Drive to SR 84 Eastbound/I-595 Eastbound
  - 864275: I-595 Eastbound Off-Ramp to SR 84 Eastbound and University Drive
  - 865233: SR 84 Eastbound East of University Drive
  - 865315: Pine Island Road South of SR 84 Eastbound
2. Linear growth rates were also calculated based on the SERPM 8 model volumes between the 2015 base year and 2045 No Build future year volumes (without Midtown Bridge) scenario. Appendix B contains a copy of the SERPM 8 daily 2015 model volume outputs. A copy of the SERPM 8 daily 2045 No Build model volume outputs is provided in Appendix C.
3. A linear growth rate was also calculated based on the socioeconomic data (population and employment data), from the SERPM 8 model for the base year (2015), and future year (2045) model scenarios. The data for Traffic Analysis Zones (TAZ) within two-miles around the I-595 corridor was utilized. The map of the TAZs that were used and associated population and employment data within those zones are provided in Appendix F.

The growth rates determined from the historical AADT data, SERPM 8 model volumes, and SERPM 8 socioeconomic data for University Drive, Pine Island Road, and SW 80th Terrace, are summarized in Table 2. The growth rates were reviewed to look at growth patterns throughout the surrounding area. In coordination with FDOT District Four staff, three area-wide growth rates were recommended for use in forecasting traffic volumes for the 2045 horizon year for roadways within the study area. After reviewing the range of growth expected for the area, a low linear growth rate of 0.8%, medium growth rate of 1.0%, and high growth rate of 1.2%, was recommended for the roadway facilities within the study area.

The recommended growth rate for each roadway was determined by evaluating the growth rates obtained from the various sources and comparing the relative conditions and growth patterns anticipated for each of the study roadways relative to each other.

- University Drive south of Peters Road saw a 2.0% growth over the past five years based on historical trends, but the SERPM 8 model only shows a growth rate of 0.2%. On the other hand, the population around the area is expected to grow by 2.5% and employment by 1.0%. A growth rate between 1.0% and 2.0% should be expected and comparing to growth on other roadways within the study area, the high growth rate of 1.2% is recommended for University Drive north of SR 84.
- For SW 80th Terrace, only population and employment data for the area are available and based on the growth and planned developments in this area, the same high growth rate as University Drive (1.2%) is appropriate.
- For Pine Island Road, the calculated growth rates indicate modest growth for the segment north of I-595, therefore, a medium growth rate of 1.0% was selected for Pine Island Road north of I-595.

A growth rate summary table is provided in Appendix F with detailed notes regarding the reasoning why each growth rate was selected for each of the roadway segments.

Future year 2045 AADTs for No Build conditions were calculated by applying the recommended linear annual growth rates to the 2019 AADTs for a time period of 26 years. The resulting 2045 No Build AADTs are provided in Table 4. In addition, the 2045 No Build AADTs are shown on Figure 6.

**Table 2: Growth Rates Summary for No Build Conditions**

## 4.2 Midtown Bridge Build Scenario 2045 AADT Forecast

The City of Plantation is planning to conduct a Project Development and Environment (PD&E) Study for a new two-way roadway bridge over the New River Canal that would provide access to and from westbound SR 84, generally located north of SR 84 and connecting between Pine Island Road and University Drive. For purposes of this memorandum, the condition of the study area assuming this new bridge is constructed, is referred to as the "Build" condition.

To develop Annual Average Daily Traffic projections for the 2045 Build conditions, the SERPM 8 2045 future year model was used to estimate the shift in traffic volumes due to the bridge providing an alternative option for trips that are destined to and from the Plantation Midtown area and SR 84. A 2045 Build scenario was created in SERPM 8. A new two-lane, two-way roadway link was added to the model between SW 80th Terrace and westbound SR 84. The new roadway link representing the bridge was assumed to connect to westbound SR 84 just east of where the existing westbound I-595 off-ramp connects to westbound SR 84. The new roadway link that was coded into the SERPM 8 model can be seen in the SERPM 8 highway network printout in Appendix D. No changes were made to the TAZ structure or socioeconomic data, that is, the Build scenario with the bridge assumes the same overall travel demand for the area as the No Build scenario without the bridge.

The 2045 Build model was run with the bridge included, and the 2045 daily model volume outputs on each of the study roadway segments were obtained and compared to the 2045 daily model volumes for the 2045 No Build scenario. The difference in the daily model outputs are shown in Appendix E.

To forecast the Build scenario 2045 AADTs, the increase or decrease in the 2045 daily model volume outputs resulting from the Build scenario, were summarized as adjustment factors. The adjustment factors were then applied to the 2045 No Build

forecasted AADTs. The adjustment factor is defined as the ratio of the model volume for the 2045 Build scenario (with Midtown Bridge) to the model volume for No Build (without Midtown Bridge) scenario. Table 4 summarizes the adjustment factors for each of the study roadway segments.

The model volume along westbound SR 84 east of the Midtown Bridge for the Build scenario was significantly higher than that of the No Build condition, with an increase of approximately 3,100 vehicles per day. The model volumes along University Drive north of SR 84, Pine Island Road north of SR 84, and westbound SR 84 west of Midtown Bridge for the Build scenario saw a decrease in traffic volumes compared to the No Build condition, with a reduction of approximately 7,400, 5,000, and 1,100 vehicles per day, respectively. Please note that these volume differences are based on model volumes. The link by link volume differences are shown on a model plot in Appendix E.

The 2045 AADTs for the Build condition were estimated by multiplying the adjustment factors to the No Build 2045 AADTs to reflect the increase or decrease in volumes on each roadway segment based on the influence of the bridge. The resulting 2045 Build AADTs are provided in Table 5. The 2045 Build AADTs are shown on Figure 6.

A screenline analysis was performed to check that the total number of trips traveling north and south on the parallel roadways across the North New River Canal remains relatively similar between the Build and No Build scenarios, and to better understand the pattern of trips that shift to use the new bridge. The screenline analysis involved reviewing the 2045 Build and No Build model volume outputs as well as the 2045 estimated AADTs for the Midtown bridge and parallel roads (Pine Island Road and University Drive) which cross over the North New River Canal and connect to SR 84. Table 3 shows the daily model volumes for the No Build and Build scenarios in the northbound direction, southbound direction and combined.

**Table 3: Screenline Analysis - No Build vs. Build Daily 2045 Model Volumes**

Scenario (direction) / Roadway (just north of westbound SR 84)	Pine Island Road	Midtown Bridge	University Drive	Total
No Build (northbound)	36,283	n/a	39,826	76,109
No Build (southbound)	32,849	n/a	41,699	74,548
<b>No Build (Total)</b>	<b>69,132</b>	<b>n/a</b>	<b>81,525</b>	<b>150,657</b>
Build (northbound)	32,694	13,780	34,431	80,905
Build (southbound)	31,506	5,075	40,247	76,828
<b>Build (Total)</b>	<b>64,200</b>	<b>18,855</b>	<b>74,678</b>	<b>157,733</b>
% Change from No Build (northbound)	-10%	n/a	-14%	6%
% Change from No Build (southbound)	-4%	n/a	-3%	3%
<b>% Change from No Build (Total)</b>	<b>-7%</b>	<b>n/a</b>	<b>-8%</b>	<b>5%</b>

The total north-south 2045 daily model volume on Pine Island Road and University Drive for the No Build scenario is 150,657. The total north-south 2045 daily model volume for the Build scenario including Pine Island Road, proposed new bridge, and University Drive is 157,733. The total north-south volumes in each scenario are similar and show a 5% difference in the Build scenario compared to the No Build scenario. This is likely due to additional trip interaction that may occur along SR 84 between University Drive and the bridge. It is noted that the model volume on the bridge is heavier in the northbound direction, than the southbound direction.

The forecasted 2045 AADTs crossing the canal screenline in the No Build and Build scenarios, as reported in Table 5 and Figure 6, show an even smaller difference than the model volumes. The total 2045 No Build AADT crossing the canal on Pine Island Road, University Drive and Midtown bridge is 189,500, and the total 2045 Build AADT is 192,000. This shows a difference of 2,500 AADT.

**Table 4: Build Scenario 2045 AADT Adjustment Factors**

Study Corridor	Intersection	Location	SERPM 8 Model			
			2045 AADT (No Build)	2045 AADT (Build)	Adjustment Factor

OID	ID	Intersection	Leg	Note
73	19		North	Use a rate close to the average of the historical, population, employment, and model growth rates.
74	19	Pine Island Road & New River Canal Road	South	Use a rate close to the average of the historical, population, employment, and model growth rates.
75	19		East	High population growth, use a value higher than employment growth. Revised to 0.80. Then adjusted downward to be consistent with other segments.
76	19		West	Low population growth, use a value close to employment growth.
77	20		North	Use a rate close to the average of the historical, population, employment, and model growth rates.
78	20	Pine Island Road & SR 84 WB	South	Average of historical, population, employment, and model growth rates.
79	20		East	SR 84 E W - high historical and population growth. Use model growth rate. Adjusted for consistency.
80	20		West	SR 84 E W - high historical and low population growth. Use model growth rate. Adjusted for consistency.
81	21		North	Even though historical growth is high, traffic counts at Site 85315 for the last four years show slow growth. Other growth rates are similar, recommend using a growth rate between population growth and employment growth, close to employment growth to account for possible high growth in historical data.
82	21	Pine Island Road & SR 84 EB	South	Even though historical growth is high, traffic counts at Site 85315 for the last four years show slow growth. Other growth rates are similar, recommend using a growth rate between population growth and employment growth, close to employment growth to account for possible high growth in historical data.
83	21		East	SR 84 E W - high historical and low population growth. Use a value higher than employment growth rate also consistent with adjacent segments.
84	21		West	SR 84 E W - Should be low grow, but use a higher one to be consistent with adjacent segments on SR 84.
93	24		North	High population growth, recommend a value close to double the employment growth rates.
94	24	SW 80th Terrace & Peters Road	South	High population growth, recommend a value close to double the employment growth rates.
95	24		East	High population and model growth, use model growth
96	24		West	High population and model growth, use model growth
149	38		North	Very high population growth, but low model growth. Recommend a value close to double the employment growth.
150	38	Peter Road & Pine Island Road	South	Very high population growth, but low model growth. Recommend a value close to double the employment growth.
151	38		East	Negative historical growth, high population growth, use a value moderately higher than employment growth
153	39		North	High historical and population growth. Recommend a value close to double the employment and also consistent with other segments.
154	39	University Drive & SW 12nd Street	South	High historical and population growth. Recommend a value close to double the employment and also consistent with other segments.
155	39		East	High population growth, no population growth, moderate employment and model growth, use employment growth, but revised downward to be consistent with other segments in the area
156	39		West	Negative historical growth, high population growth, and moderate employment and model growth, use model growth.
161	41		North	High historical growth, similar population and employment growth, use a value close to double the employment growth to account for historical growth.
162	41	University Drive & SR 84 WB	South	Negative historical growth, but similar population and employment growth. Use the average of the two.
163	41		East	SR 84 E W - Should be low grow, but use a higher one to be consistent with adjacent segments on SR 84.
164	41		West	SR 84 E W - high population growth. Use a value close to double the employment growth.
165	42		North	Negative historical growth, but similar population and employment growth. Use the average of the two.
166	42	SR 84 EB & University Drive	South	Negative historical growth, but similar population and employment growth. Use the average of the two.
167	42		East	SR 84 E W - high historical growth, high model growth, use a high value of 1.20, but adjusted for consistency purpose.
168	42		West	SR 84 E W - high historical growth. Should be a small number. Adjusted to be consistent with other SR 84 segment.
